# INTRODUCTION TO SELENIUM

**RAM SHARMA** 

#### **HOW SELENIUM WORKS?**

- For each selenium command, a http request is created and sent to browser driver.
- Commands are executed on browser and http response is sent back.
- Communication is done using JSON wire protocol. It is a restful web service.

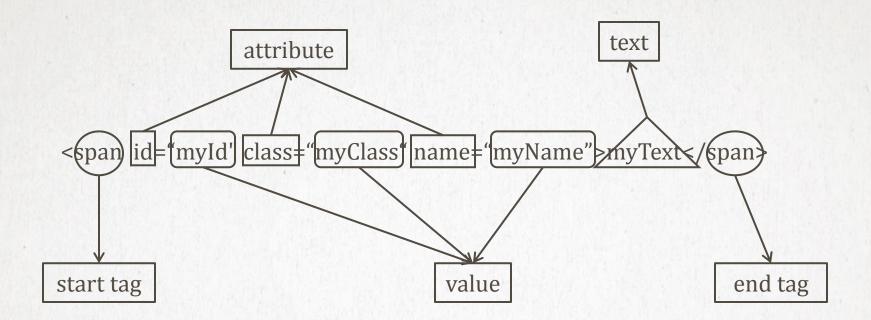

## **BASICS OF HTML**

- HTML stands for Hypertext Markup Language
- It starts and ends with html tag. Also contains body, head, title.
- Anything inside a webpage is an element and in terms of Selenium, we call it as WebElement.
- Between start and end tag of a particular element, it can contain another element or text or nothing.
- Along with start tag, it also contains attribute which can have value in form of attributeName = Value.
- Anything inside <a> tag acts as hyperlink.
- A webpage can contain frames and within a frame, it also have html inside it.
- It can be viewed by Page Source or by Inspect Element(F12).
- You can install Mozilla addons firebug and firepath in firefox.

## **BUILDING BLOCKS OF HTML**

- Textbox or Textarea
